

Green Oases

— For Trading & Agriculture —

Who Are We?

Our company has launched a large scale cultivation project to provide solutions for growing challenges, such as pesticide residue and microbiological safety.

This includes new cultivation areas and methods, ensuring pure water, soil and air conditions.

In order to consistently meet the ever increasing regulations and market requirements our farms are inspected and samples taken on a regular basis.

We place great value on the education and training of our farmers to ensure that all our food-safety and quality requirements are met.

Products catalouge

Product Name	Anise
الاسم بالعربي	ينسون
Botanical Name	Pimpinella anisum
Color	Yellow
Available Forms	Dried Seeds
Final Product Size	Seeds 2:3 mm / Powder
Packing	Fiber or Paper Packaging (25Kg)
Harvest	May
Availability	whole year
20ft Container (Tons)	12
40ft Container (Tons)	24

Product Name	Chamomile
الاسم بالعربي	شاي بابونج
Botanical Name	Chamaemelum Nobile
Color	Yellow
Available Forms	Flower/stems
Final Product Size	Flowers / Pollen (mixed with seeds)
Packing	Carton for flowers (12.5Kg) ; fiber bags for others (20Kg)
Harvest	January to April
Availability	January to August / for powder from February to December
20ft Container (Tons)	3.5 for carton / 4.5 for bag
40ft Container (Tons)	7 for carton / 9 for bag

Products catalouge

Our dates are sorted nicely in five sizes: small, medium, large, jumbo and jumbo large. Its' tastes suitable for adults and children.

البلح الحجازي

Hejazi Dates

The harvest season begins during the Khelal phase, from mid-August until the end of September.

The consumption and marketing of Hejazi dates occur during the Khelal phase when the fruit colour is Red.

The colour of the mature fruit changes to dark during the soft phase, and finally to pale during the semi-dry phase.

Our dates are sorted nicely in five sizes: small, medium, large, jumbo and jumbo large. Its' tastes suitable for adults and children.

البلح السيوي أو الصعيدي

Sewi Dates

The harvest season begins at the Khelal phase, from the beginning of September until the end of October.

Sewi dates are consumed at the end of the Khelal phase. When the fruit is fully mature, its colour changes from pale yellow to pale brown in the semi-dry phase. In terms of cultivation, the fruit reaches the semi-dry phase on the tree because of the arid conditions.

Sewi dates are suitable for consumption and marketing at both the Khelal and semi-dry phases.
